

Seismic Hazard Mitigation Program for Highway Infrastructures

W. Phillip Yen, Ph.D., P.E.
Program Manager, Seismic Hazard Mitigation
Office of Infrastructure, R&D FHWA

Outline

- Backgrounds
 - Risk Management & Hazard Mitigation
 - National Major Bridge Seismic Research – Under the ISTEA, TEA-21
- Retrofitting – Existing Bridges
 - Seismic Retrofitting Manual / Guidelines
- Designing – New Bridges
 - NCHRP 12-49 / LRFD Seismic Design Guide Spec.
- Planning – Risk Analysis & Loss Estimation
 - REDARS 2: Methodology and Software for Seismic Risk Analysis of Highway Systems
- Reconnaissance – Bridge Seismic Performance
- Current Research & National and International Cooperative Research Projects

US Highway Infrastructure Inventories

- ~ 600,000 Highway Bridges in the NBI Data
- ~ 300 Tunnels
- ~ 4,200,000 miles Roads

Significant Earthquake Damages in the U.S. 1964-2001

Location	Date	Magnitude	Damages (in Millions)	Deaths
Prince William Sound, AK	03/27/1964	8.4	\$311.0	125
San Fernando, CA	02/09/1971	6.6	\$505.0	65
Loma Prieta, CA	10/17/1989	7.1	\$6,000.0	63
Northridge, CA	01/17/1994	6.7	\$20,000.0	61
Nisqually, WA	02/28/2001	6.8	\$2,100.0	1?

Seismic Research Prior to 1992

- Various seismic research projects in Design and Retrofittings
- Major Products:
 - Seismic Retrofitting Guidelines for Highway Bridges - *FHWA/RD-83/007*.
 - Seismic Design and Retrofitting Manual for Highway Bridges *FHWA-IP-87-6*
 - Full Scale Bridge Column Dynamic Testing – NIST – William Stone

Seismic Research Programs under ISTEA

- Two Seismic Vulnerability Studies were initiated in cooperation with Multidiscipline Center for Earthquake Engineering Research (MCEER).
 - Existing Bridges
 - Initiated 1992
 - \$12 Millions/ 6 years
 - New Bridges
 - initiated 1993
 - \$2.25 Millions/ 4 years

Research Tasks

- Seismic Hazards and Ground Motions
- Geotechnical Engineering
- Structures and Systems
- Intelligent and Protective Systems
- Earthquake Reconnaissance
- Demonstration Projects
- Workshops and Conferences

TEA-21 : Seismic Vulnerability Study of Highway Systems

- Background:
 - Seismic Research Studies in New and Existing Highway Construction
 - Recommendations for Seismic Bridge Design Specifications.
 - Seismic Retrofitting Manual
 - Initiated 1998, \$12 Million/ 6 years
- Objectives:
 - Transfer research results into practice
 - Refine and advance those final products
 - Expand and convert to design and construction specifications

Research Tasks

- Loss Estimation Methods for Highway Systems
- Seismic Design and Retrofit Manual for Long Span Bridges
- Earthquake Protective Systems
- Foundation and Geo-technical Studies
- Special Studies
- Technology Exchange and Transfer

Special Studies

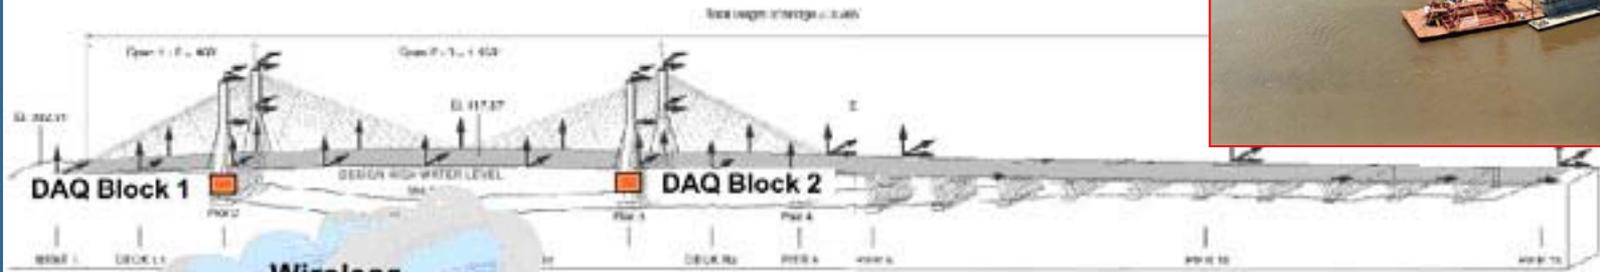

- Task of the project will address a series of special studies including:
 - Post-earthquake Nondestructive Assessment of Retrofitted Bridges
 - Cape Girardeau Cable-stayed Bridge Instrumentation
 - NCHRP Project 12-49 Supporting Studies
 - Earthquake Reconnaissance

Mitigation Seismic Hazard through **Designing**

- Pre-San Fernando (1971)

- 0.06g Static Coefficient

- No Consideration For

- » Spectral Response
- » Foundation Material
- » Structural Ductility

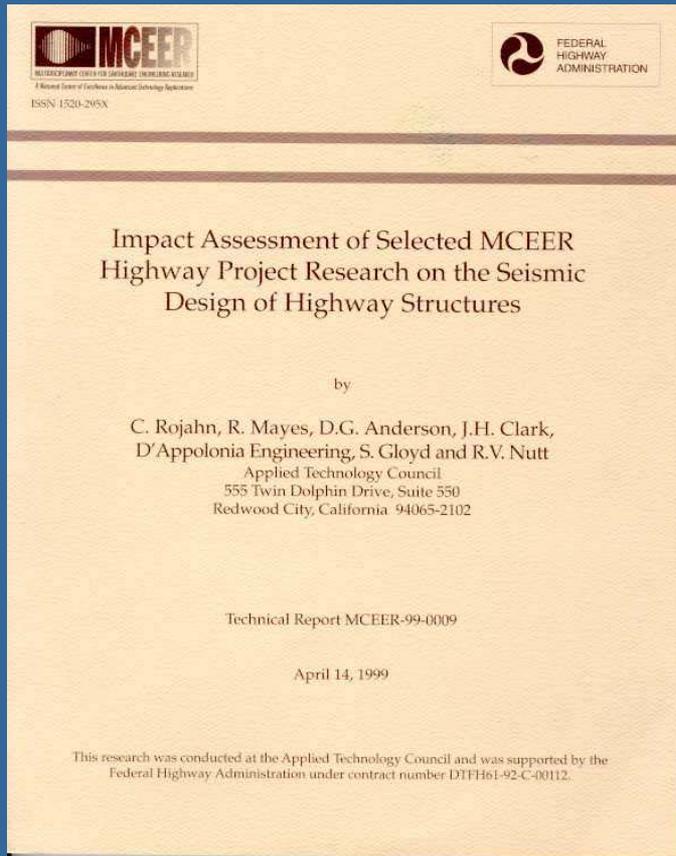

- Today

- Seismic Performance Criteria Identified

Development of Seismic Design Specifications

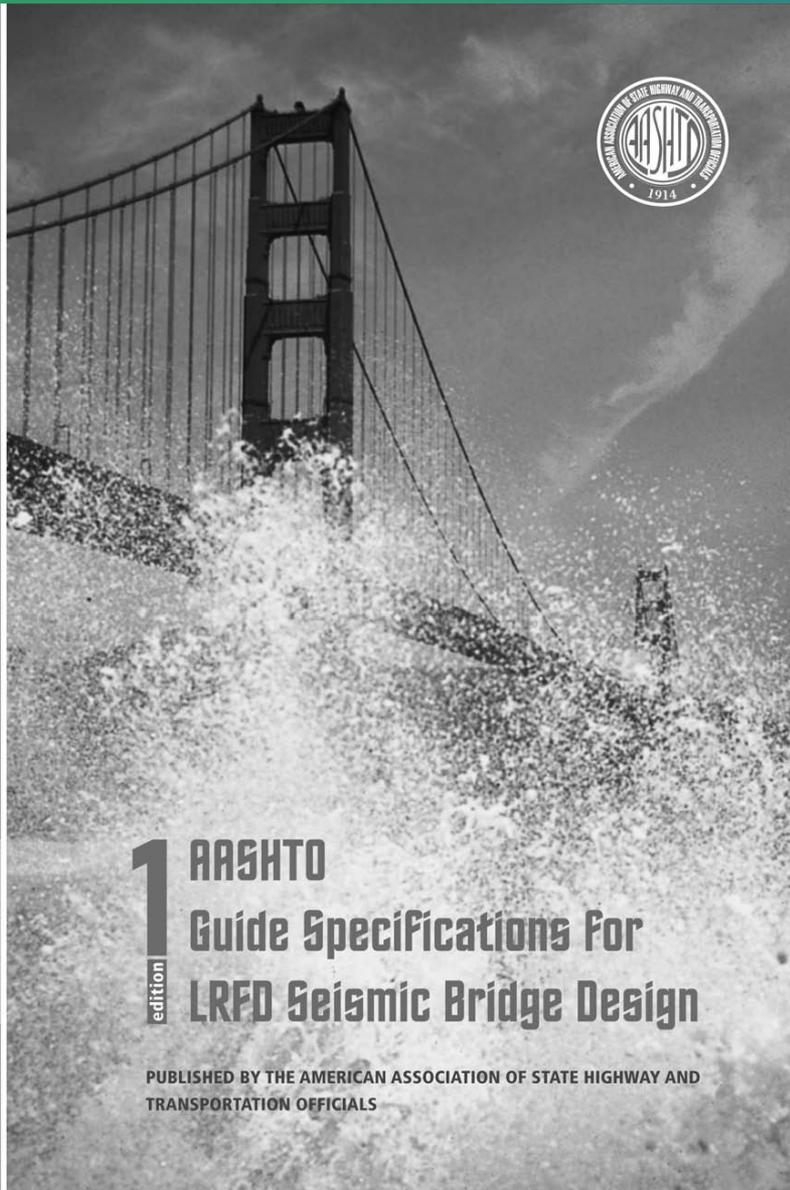

RESEARCH CENTER

ABBREVIATED TABLE OF CONTENTS

- SECTION 1: INTRODUCTION
- SECTION 2: DEFINITIONS AND NOTATION
- SECTION 3: GENERAL REQUIREMENTS
- SECTION 4: ANALYSIS AND DESIGN REQUIREMENTS
- SECTION 5: ANALYTICAL MODELS AND PROCEDURES
- SECTION 6: FOUNDATION AND ABUTMENT DESIGN
- SECTION 7: STRUCTURAL STEEL COMPONENTS
- SECTION 8: REINFORCED CONCRETE COMPONENTS
- APPENDIX A: FOUNDATION-ROCKING ANALYSIS

PERFORMANCE CRITERIA

- Bridges shall be designed for the **life safety** performance objective considering a seismic hazard corresponding to a **7% probability of exceedance in 75 years. i.e. – 1000 Yr.** for “Normal Bridges”.
- Higher levels of performance, such as the operational objective, may be established and authorized by of the bridge owner.

Life safety

- Low probability of collapse but, may suffer significant damage and significant disruption to service is possible.
 - cracking,
 - reinforcement yielding,
 - major spalling of concrete
 - extensive yielding and local buckling of steel columns,
 - global and local buckling of steel braces, and
 - cracking in the bridge deck slab at shear studs.

SEISMIC DESIGN CATEGORY (SDC)

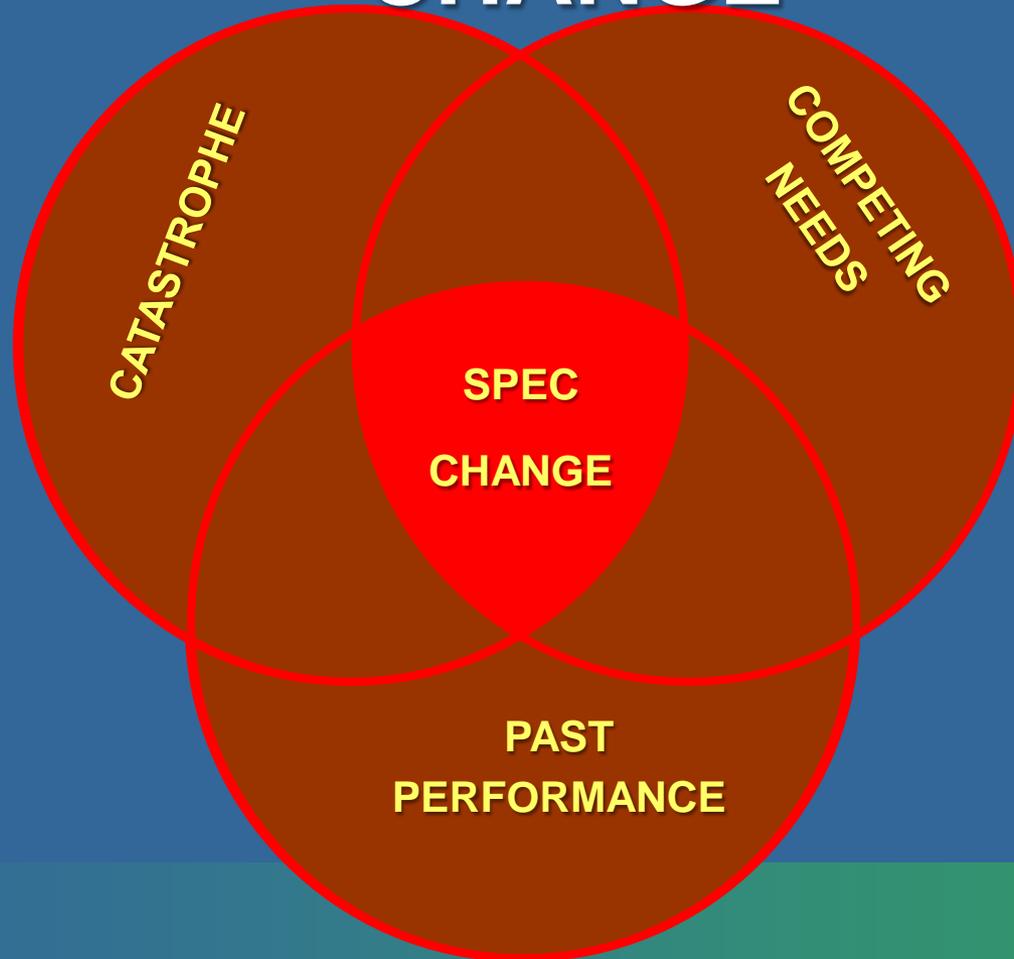

- Partitions for Seismic Design Categories A, B, C & D

Value of $SD_1 = F_v S_1$	SDC
$SD_1 < 0.15$	A
$0.15 \leq SD_1 < 0.30$	B
$0.30 \leq SD_1 < 0.50$	C
$0.50 \leq SD_1$	D

IMPLEMENTING SPECIFICATION CHANGE

INSTRUCT Pushover Analysis Program

OBJECTIVE

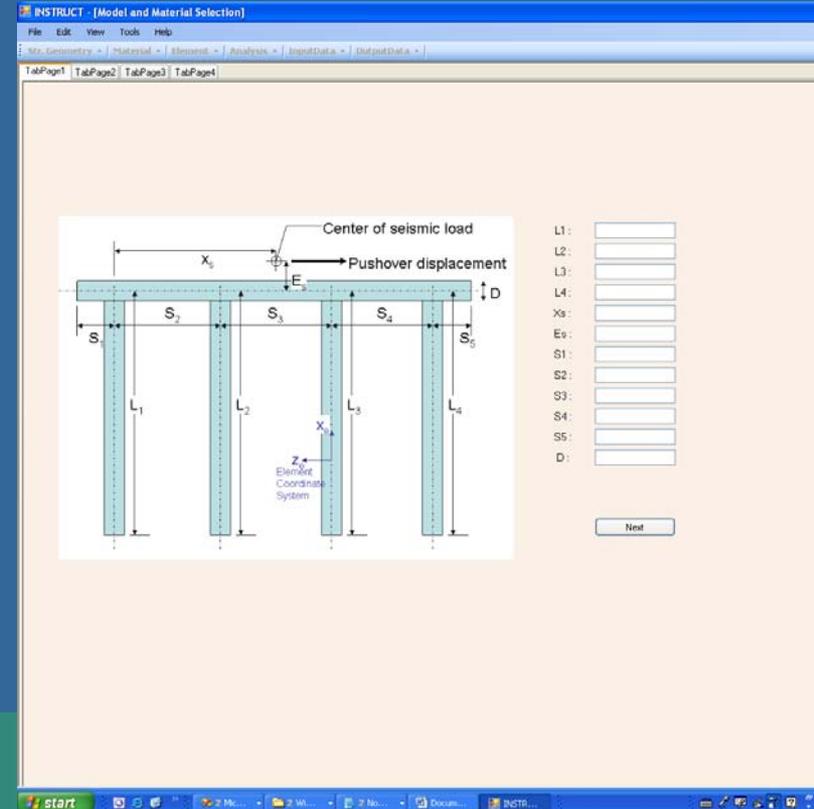

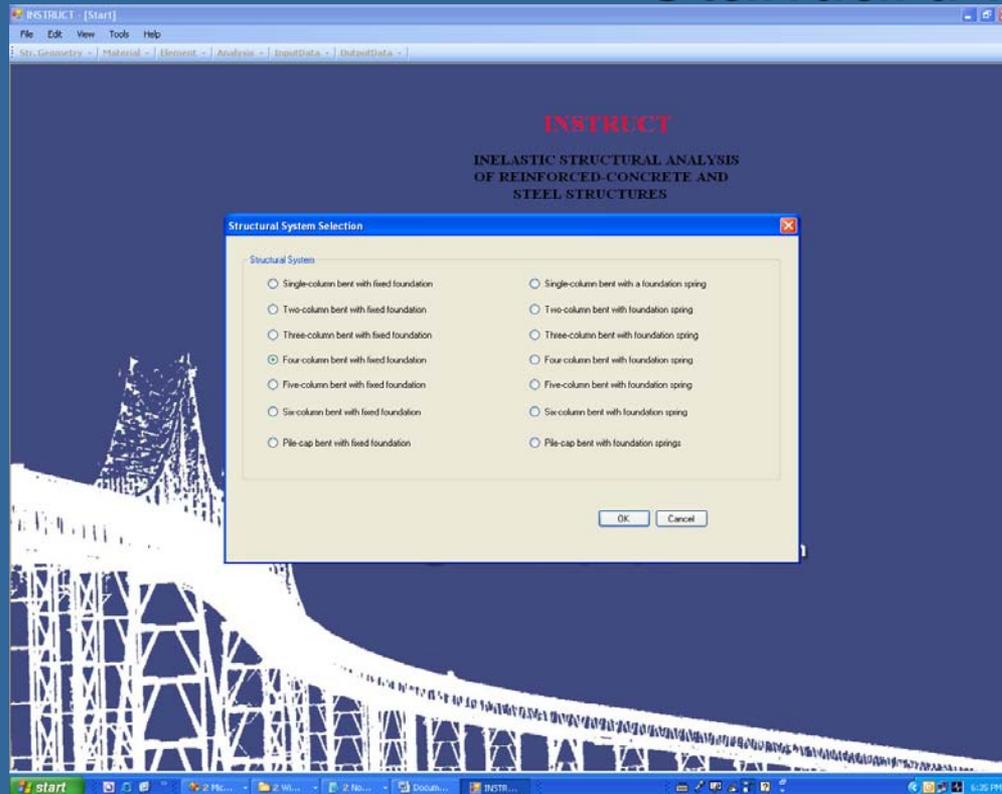

- This project aims to develop a window-based user-friendly interface for the current developed inelastic structural pushover analysis FORTRAN computer program. The ultimate goal is to provide State DOTs a useful tool (not a mandated tool) for the pushover analysis of highway bridges.

REDARS 2: Methodology and Software for Seismic Risk Analysis of Highway Systems

- S.D. Werner, C.E. Taylor, S. Cho, J-P. Lavoie, C. Huyck, C. Eitzel, H. Chung and R.T. Eguchi
- The REDARS 2 report provides the basic framework and a demonstration application of the Seismic Risk Analysis (SRA) methodology and its modules. The main modules of the REDARS 2 SRA methodology include hazards, components, system and economic. The northern Los Angeles, California highway system is used as a demonstration application of the SRA methodology.

REDARS 2 METHODOLOGY AND SOFTWARE FOR SEISMIC RISK ANALYSIS OF HIGHWAY SYSTEMS

By

Stuart D. Werner, Craig E. Taylor, Sungbin Cho,
Jean-Paul Lavoie, Charles Huyck, Chip Eitzel,
Howard Chung and Ronald T. Eguchi

This publication was produced by MCEER for the Federal Highway Administration under contract number DTFH61-98-C-00094

TURNER-FAIRBANK HIGHWAY RESEARCH CENTER

Performance-based retrofit

- Explicit attempt to satisfy public expectations of bridge performance for earthquakes ranging from small to large... for example:

Performance	Earthquake		
	Small	Intermediate	Large
No interruption	√	√	
Limited access		√	√
Closed for repairs			√

Performance-based retrofit

- Application of *performance-based design* to bridge retrofitting
 - two earthquake levels (Lower Level, Upper Level)
 - two bridge types (standard, essential)
 - three service life categories (ASL1,-2,-3)
 - two performance levels (life safety, operational)

Seismic retrofit categories

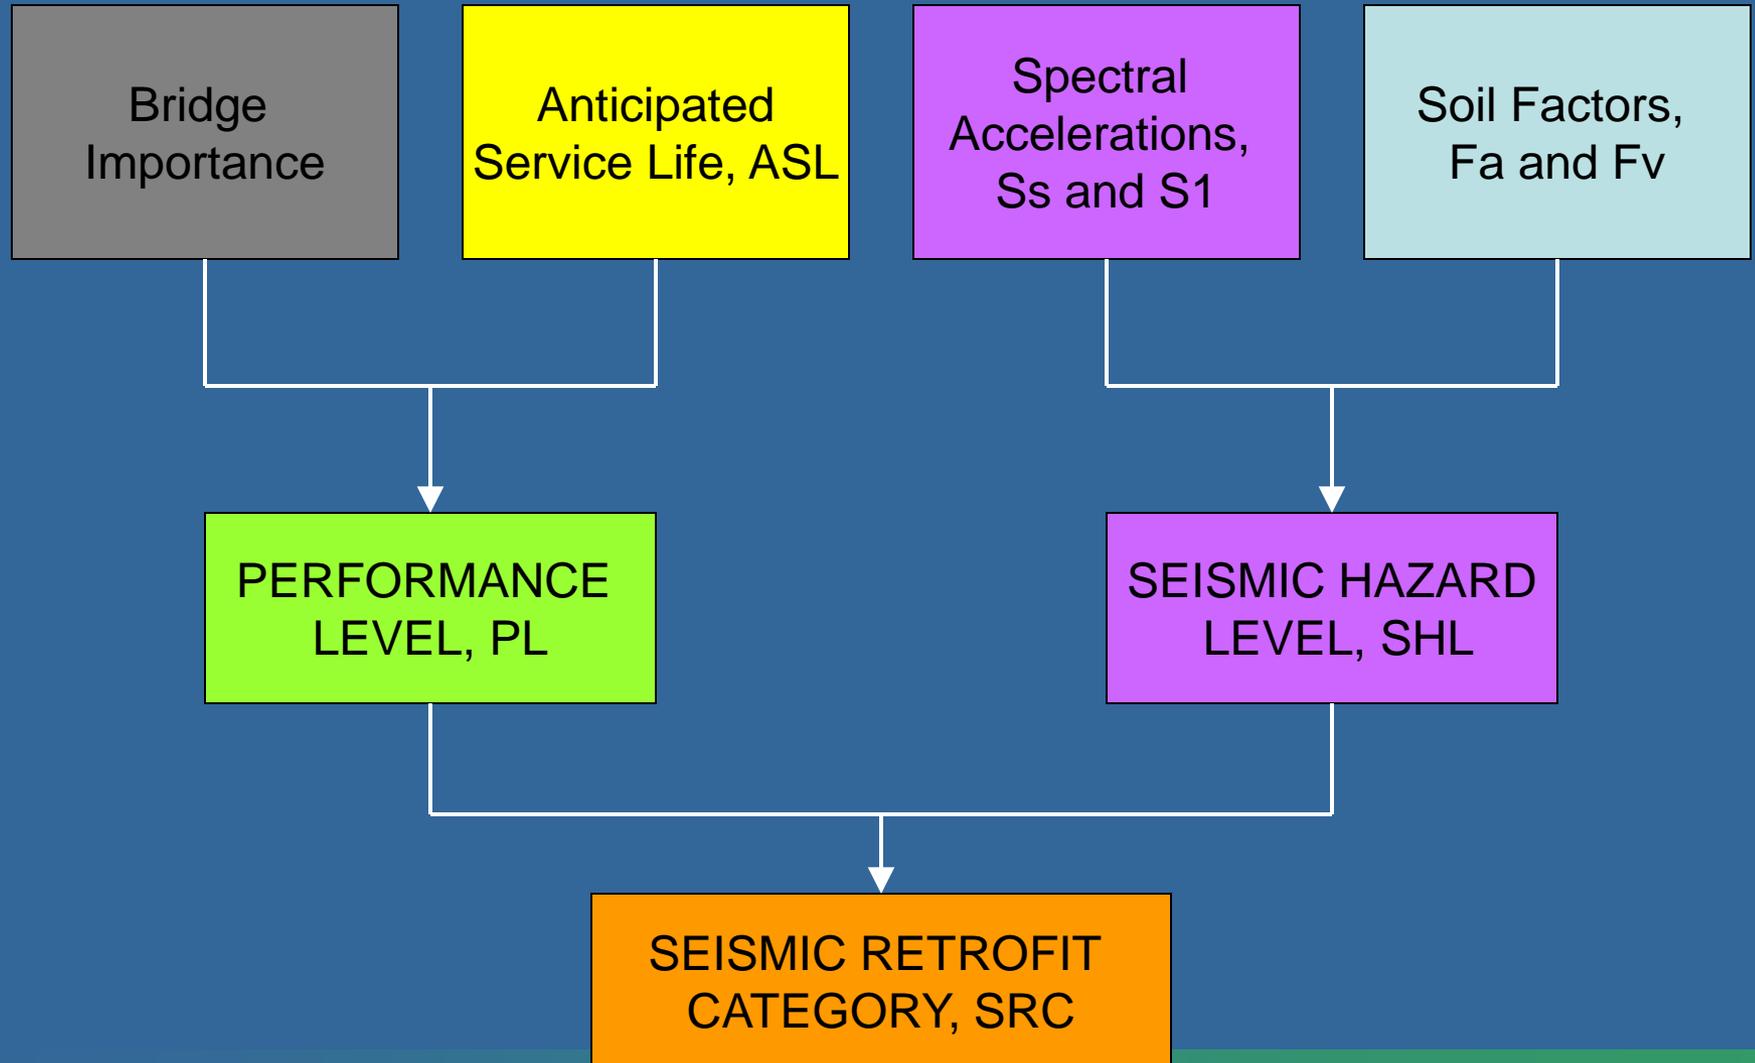

- *Seismic Retrofit Categories, SRC*, are used to recommend minimum levels of
 - screening
 - evaluation, and
 - retrofitting

If these minima are satisfied, the required performance levels will be satisfied.

- SRCs are similar to *Seismic Performance Categories (SPC)* used in new design

TURNER-FAIRBANK HIGHWAY RESEARCH CENTER

Upper and lower level earthquakes

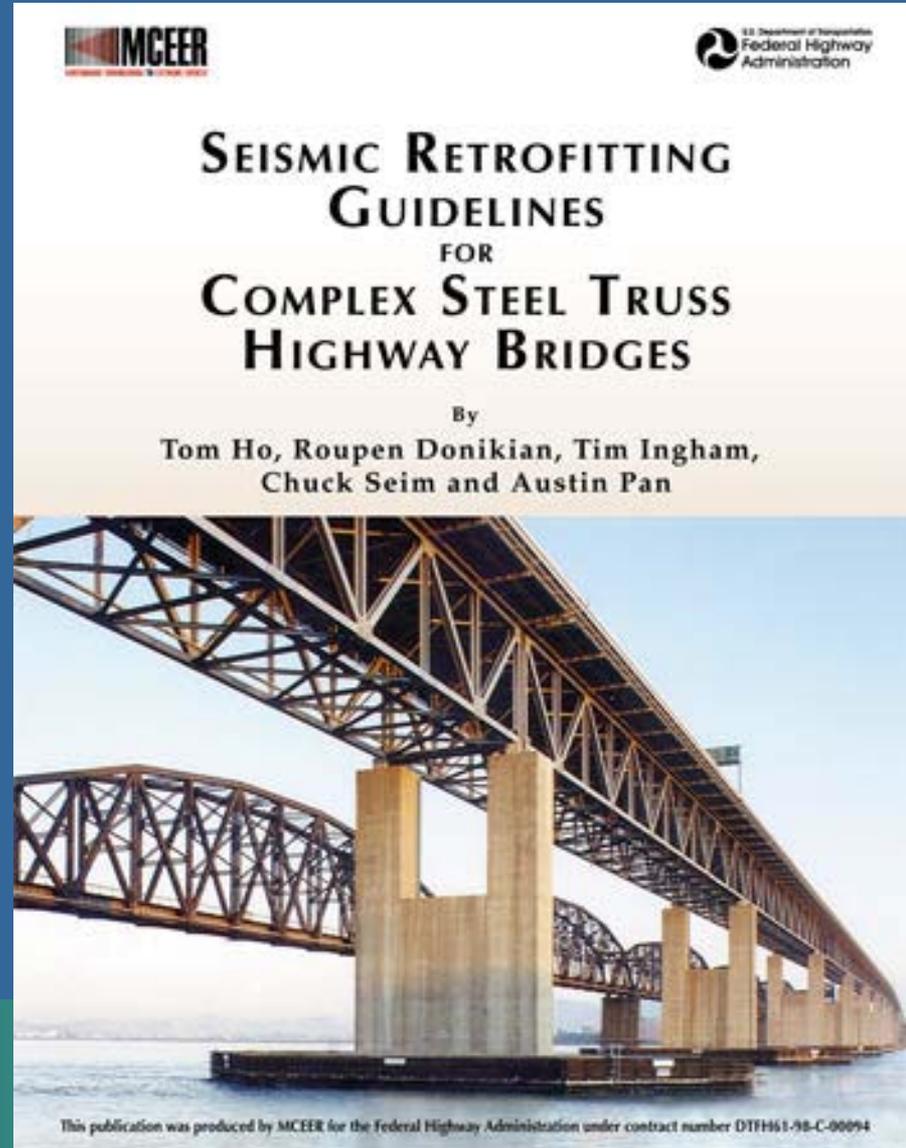

- Lower Level earthquake (LL):
100-year return period
(50% probability of exceedance in 75 years)
- Upper Level earthquake (UL):
1000-year return period
(7% probability of exceedance in 75 years)

Seismic Retrofitting Guidelines for Complex Steel Truss Highway Bridges

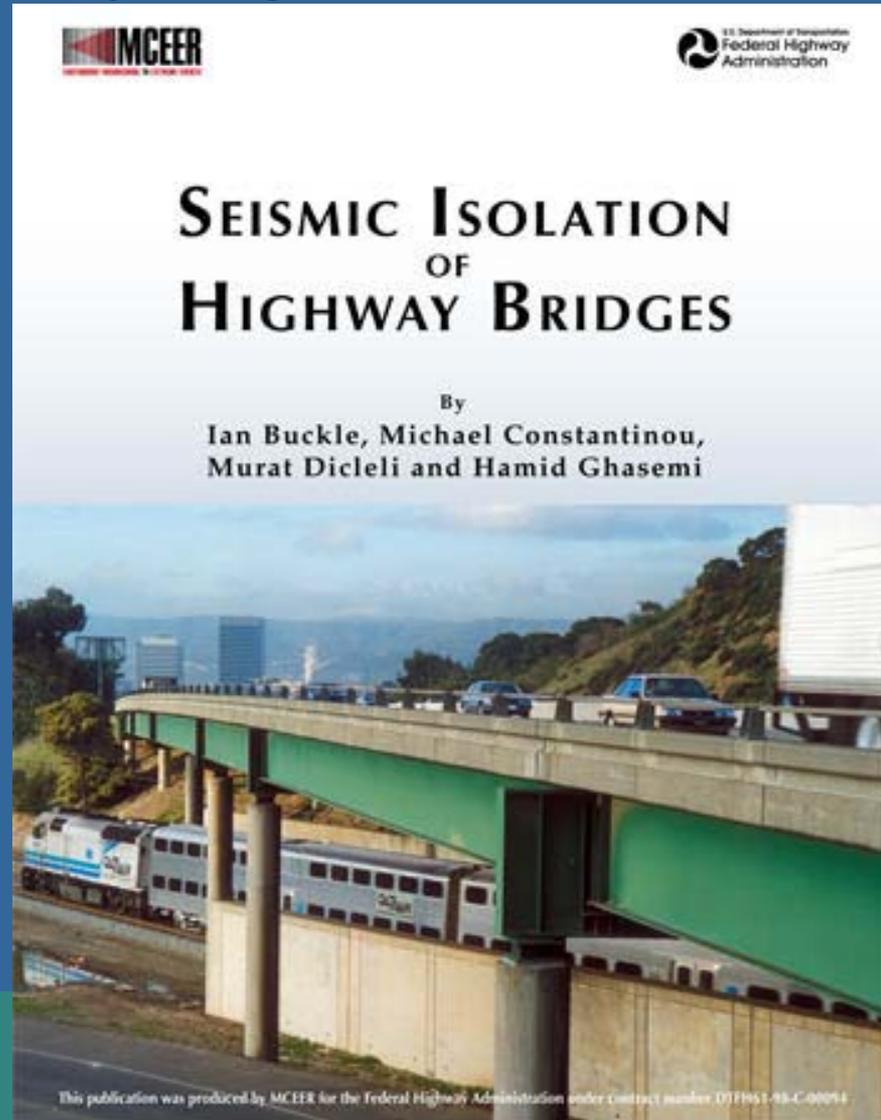

- T. Ho, R. Donikian, T. Ingham, C. Seim and A. Pan
- A performance-based seismic retrofit philosophy is used. The guidelines cover all major aspects pertinent to the seismic retrofitting of steel truss bridges, with a focus on superstructure retrofit. Case studies are provided. These guidelines are a supplement to the *2006 FHWA Seismic Retrofitting Manual for Highway Structures* for “unusual or “long span” steel trusses.

Seismic Isolation of Highway Bridges

- I.G. Buckle, M. Constantinou, M. Dicleli and H. Ghasemi
- *Seismic Isolation of Highway Bridges* presents the principles of isolation for bridges, develops step by step methods of analysis, explains material and design issues for elastomeric and sliding isolators, and gives detailed examples of their application to standard highway bridges. The manual is a supplement to the *Guide Specifications for Seismic Isolation Design* published by AASHTO in 1999.

Mitigation Seismic Hazard through **Advanced Research**

SAFETEA-LU Seismic & Multi-hazards Research - 2005-2009

- For MCEER (Buffalo)- \$4.0 M Advancing Seismic Design and Construction Technology for Highway System
- For UNR (RENO) – \$4.0 M Developing Integrated System for Seismic Risk Assessment
- For MCEER (Buffalo) – \$3.0M Developing Multiple Hazard Design Principle for Highway Bridges

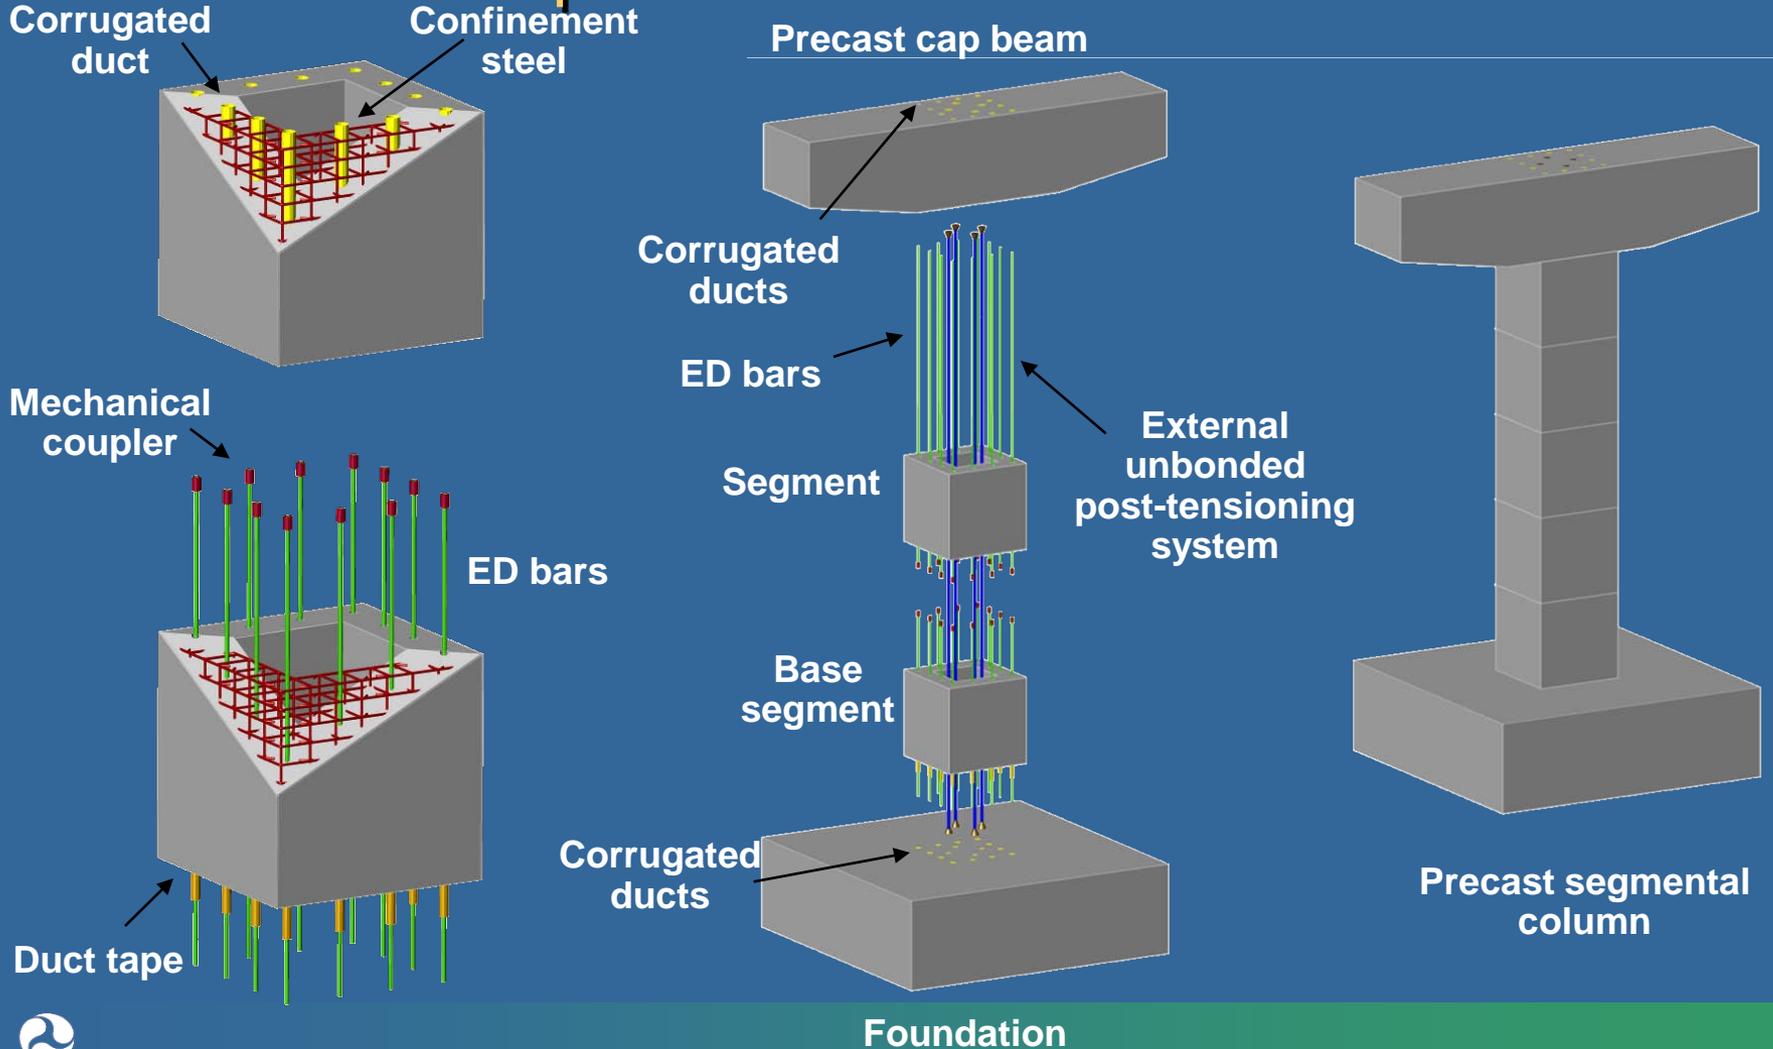

SAFETEA-LU

- For MCEER - about \$4.0M Advancing Seismic Design and Construction Technology for Highway System
 - Developing Accelerated Bridge Construction Detail in High Seismicity Area
 - Innovative Bridge Technology in Advancing Seismic Response (Roller Bearing and others.)
 - Opportunity Researches
 - Technology Transfer/ Exchange : National Seismic Conferences & Others workshops..

Proposed Column with ED Bars

SAFETEA-LU

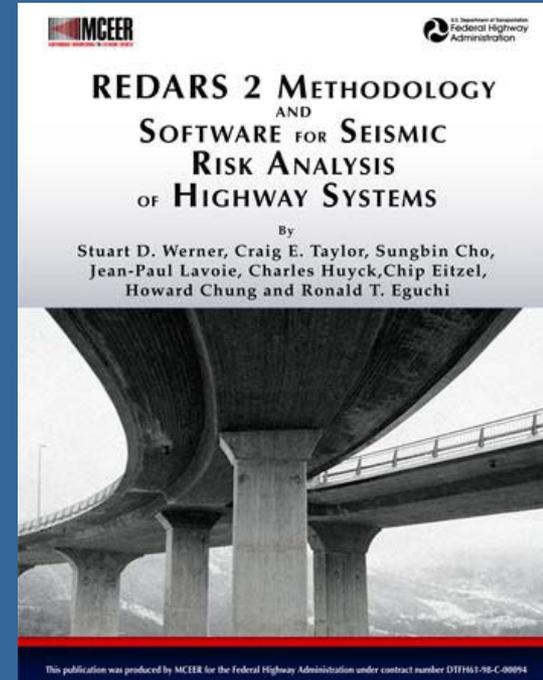

- For UNR (RENO) - about \$4.0M Developing Integrated System for Seismic Risk Assessment
 - ENHANCEMENTS TO LOSS-ESTIMATION TECHNOLOGIES FOR HIGHWAY SYSTEMS
 - REDARS-2™ CUSTOMIZATION FOR RESILIENCE STUDIES
 - CHARACTERIZATIONS OF SEISMIC HAZARDS FOR NEAR-FAULT BRIDGES
 - DESIGN GUIDELINES AND FRAGILITY FUNCTIONS
 - SEISMIC RESPONSE OF HORIZONTALLY-CURVED HIGHWAY BRIDGES
 - NEAR-FAULT BRIDGES STUDY
 - FRAGILITY FUNCTIONS FOR CURVED, NEAR-FAULT, AND OTHER BRIDGES
 - OPPORTUNITY RESEARCH

Seismic Research (Title V)

- For UNR (RENO) - about \$4.0M Developing Integrated System for Seismic Risk Assessment – Major Deliverables
 - A tool (A new version of REDARS) for the quantification of highway resilience by improving current loss estimation technologies such as REDARS.
 - Factors that affect system resilience, such as damage-tolerant bridge structures and network redundancy.
 - Seismic design guides for curved bridges and bridges in near-fault regions.
 - New technologies for improving the seismic performance of bridges.

Multi-hazard Research (Title I)

- For MCEER (Buffalo) – about \$3.0M Developing Multiple Hazard Design Principle for Highway Bridges – Major Deliverables
 - Recommended Design Principles and Methodologies used for all Natural Hazards and Extreme Load Effects
 - Case Evaluation and Studies of Highway Bridge Design Against Multiple-Hazards .
 - Recommended Guide Specification for Isolators & Dampers

Full Scale Seismic Performance Testing of Bridge Column

- Objectives
 - Provide Good Test Data Which Are Useful to Solve "Scale Effects," and Calibrate Analytical Models
 - Verification of Small & Medium Scale Test Results
 - Educational Purpose to Public

National Cooperative Projects - Pooled Fund Study

- Full-Scale Bridge Column Model Shake-Table Tests
 - A National Cooperative Research
 - A Bench Mark Test for Bridge Model W/O Scaling Effects
 - Tested in 09/2010 (UCSD Shake table)
 - Funding Committed: NSF (\$200K), FHWA thru MCEER & UNR (\$200K), CALTRANS (\$300K), MTDOT (\$40K) – Total \$740K

Transportation Seismic Activities in the Mid-America Region

- Research Studies
- Bridge Retrofitting

FHWA/ MST (Missouri Science and Technology) Seismic Study – \$800K

- Earthquake Hazards Assessment and Mitigation: a Pilot Study in the New Madrid Seismic Zone
- Focused on Design, Retrofitting & Assessment of Highway Infrastructure
- Completed in year 2005

Seismic Retrofitting of Existing Transportation Infrastructures

- Through current Federal-Aid Program
- Bridge Seismic Retrofitting is eligible for these funding.

Seismic Retrofit of U.S. 40/I-64 Double Deck Bridge in Missouri

Seismic Retrofit of U.S. 40/I-64 Double Deck

**Briefing on Impact of New Seismic Design
Provisions on Bridges in Mid-America Research
TPF-5(155) FHWA, GA, IL, IN, MO, MS, TN**

**Reginald Desroches, Amr, Elnashai, Jamie Pagett,
Jerry Shen, Linda Kuo, Phillip Yen**

Objectives

To apply a comprehensive methodology to design bridges in the CSUS - using the NCHRP 12-49 as a basis (New Design Provisions 20-7 / 193). The methodology would address:

- Current source models and maps used for ground motion in the CSUS
- Current site response models
- Fragility models and network assessment to determine required level of seismic protection
- Detailed analysis to derive retrofit design forces and deformations

Work Performed

- Reviewed earthquake design values and procedures that produced these values in the CSUS area.
- Reviewed available tools for design seismic hazard determination, including those published by AASHTO and USGS.
- Obtained seismic hazard intensity grid data of the CSUS area.
- Produced ground motion computer software for use in design and retrofitting of bridges in the CSUS area.
- Review of literature to identify soil properties.
- Set up analytical framework for quantifying the effect of inelastic response of the soil on damage assessment of RC bridges.
- Set up analytical model for RC bridge.
- Set up soil model for the bridge.

Work Performed (cont.)

- Conducted a review of state seismic retrofit practices for states in Central and Southeastern US.
- Conducted a review of the state of seismic retrofitting practice in the CSUS. Documented theory, retrofitting details, and applications of various retrofits.
- Reviewed the LRFD Guidelines for Seismic Design of HW Bridges, NCHRP Project 20-07/ 193.
- Documentation of fragility analysis for Mid-America as-built and retrofitted bridges.
 - Preliminary analysis of bridge model with and without SSI
 - Preliminary analysis of bridge model with and without liquefaction
 - Spot analyses with model parameter variations
- Compared the different methods of analysis, from the elastic static response to the fully inelastic dynamic response analysis. Two bridge models, one simple and one complex multi-span structures, have been selected and modeled for the comparison study.
